MOBIS

Auto Diagnosis and Repair

Complete 4-Station Diagnosis

MOBIS DIAGNOSTIC CENTER WILL PERFORM THE FOLLOWING TESTS ON YOUR CAR FOR SAFETY AND PERFORMANCE

1. Preliminary Inspection

In this station a general inspection is made of warning systems, lights, horn, belts, air cleaners, tires, fluid levels and other important safety equipment.

2. Engine Performance Test

Your engine is tested by running the car on a dynamometer which simulates freeway conditions. Electronic instruments reveal electrical and carburetor problems, compression, horsepower, transmission shift points, and other items.

3. Brake and Front End Tests

Brakes are tested at highway speeds to determine balance, rolling resistance, drag, fade, and other problems. A simulated stop is made from 40 miles per hour to determine stopping distance and lateral movement.

Then the dynamic wheel aligner electronically measures caster, camber and toe settings which are critical for tire wear and steering problems.

4. Under Car Inspection

After the car has been tested under road conditions an under car inspection is made to examine fluid leaks, loose connections, steering and suspension parts, shock absorbers, muffler and tailpipe. Brakes are examined to determine reserve lining.
